SISPSA unifies all clinical commercial and financial operations on one auditable platform

Venezuelan prepaid medicine operations have historically relied on fragmented manual processes — **SISPSA now consolidates 20 functional modules** across commercial, clinical, and financial domains into a single traceable system. Without this integration, regulatory compliance and operational control would remain structurally at risk.

PLATFORM SCOPE

20 modules, 90+ entities, one unified system

- **13 role-based access profiles** enforce granular permissions across every sensitive operation system-wide.
- **5 payment modalities** — cash, mobile, POS, bank transfer, and Zelle — with formal reconciliation and receipt workflows.
- **Triple-layer coverage verification** checks contract status, waiting periods, and monetary caps at every medical visit.
- **SUDEASEG-002 and RTON reports** generated automatically, meeting all regulatory formats required by the Superintendency.

90+ INFORMATION ENTITIES MANAGED

01
Commercial Operations

- Clinic network, insurance plan design, and agency hierarchies managed under **one commercial module** with real-time performance dashboards.
- **Automatic commission calculation** distributes payments — Advisor 10%, Agency 4%, Clinic 70% — with fully auditable reports.

02
Affiliation and Contracts

- **Single-transaction enrollment** generates the member profile, contract, 12 monthly installments, and email confirmation simultaneously.
- **Mass corporate onboarding** via structured files uses row-level transactional isolation so individual errors never corrupt valid records.

03
Financial Governance

- **Multi-currency support** (USD and Bs.) captures the official BCV exchange rate per transaction, ensuring full conversion traceability.
- **Per-clinic fund consumption monitor** tracks budget utilization against control thresholds, enabling proactive financial intervention.

04
Security and Auditability

- **Full audit log** records every sensitive operation — deletions, cancellations, and role changes — with user, timestamp, and stated reason.
- Cloud document storage uses **unique per-file access keys** and logical deletion principles to protect integrity without data loss.

Present this report to SUDESEG as SISPSA's official regulatory submission, then schedule an internal review to validate role permissions and audit log completeness before the next inspection cycle.
